

BECKY JOHNSON

Nurse Midwife

- ☀ A nurse midwife is an advanced practice nurse specializing in obstetric and gynecologic care.
- ☀ We provide healthcare to women from puberty thru menopause and for babies up to 1 month old.
- ☀ Nurse midwives deliver babies in the hospital, in birthing centers and in the home.
- ☀ Like nurse practitioners, we order tests and write prescriptions
- ☀ Midwives understand that pregnancy, labor and birth are normal processes and support families during this special time.
- ☀ Nurse midwives are part of the healthcare team and work with doctors if the need arises.

Midwives help
Families grow
